

**PosiScreed** is a cementitious product formulated in conjunction with a Styrene Acrylic Co-Polymer Emulsion, consisting of aggregates and fibres. The product has been developed as a skim plaster.

## Application Method

- Ensure that the base is clean and free of debris, excessive dust or powder and any objects that might cause non-adhesion to the substrate.
- PosiScreed needs to be mixed as a plaster, dry and wet mix.
- The product is supplied with a prepacked liquid binder and a maximum of 15 Liters of water can be mixed in.
- PosiScreed must be applied by metal trowel to the desired thickness (2-5mm)
- Allow to dry for approximately 30min – 1 hour before commencing with floating
- Use Repello during the floating phase to achieve the desired finish
- It is imperative that the final finish is reached while the product is still workable as it will cure at 30 – 40 mpa

## Applications

1. Floor Screed
2. Crack and Concrete repairs
3. Skim Plaster

PosiScreed is a cementitious skim and resembles a plaster finish
